EDUCATION

University of British Columbia

Bachelor of Science in Computer Science, GPA: 4.1/4.33

Vancouver, BC

September 2020 – May 2025

EXPERIENCE

Full-Stack Software Engineer

June 2025 – Present

Tesla

Fremont, CA

- Develop internal and customer-facing web applications within Tesla's Global Financing Engineering team, leading the end-to-end implementation of the Payment Estimator used across 400+ Tesla stores in North America.
- Optimized performance of a high-traffic bulk order retrieval API, reducing data load times by 83% and materially improving system responsiveness.
- Led re-architecture of the platform's access control system, redesigning permission flows and onboarding applications to a new authorization framework to improve security, scalability, and long-term maintainability.
- Designed and implemented an automated stipulation-notification workflow, enabling 16 external banking partners to review and decision customer documents directly within Tesla's platform, eliminating manual email-based processing and significantly reducing decision turnaround time.

Software Engineer Intern

January 2024 – August 2024

Tesla

Fremont, CA

- Utilized schema-driven development to architect modular React + TypeScript components for Tesla's Fintech Services team.
- Redesigned and refactored 25+ UI components as part of a major design overhaul of internal business tools, improving UX consistency and maintainability.
- Developed and deployed a new API route integrating with LaunchDarkly, enabling controlled rollouts for 12+ feature launches and post-deployment adjustments.
- Built and integrated scalable backend APIs using C#/.NET with an MVC approach to support new finance workflows and data pipelines.

Software Engineer Intern

September 2022 – April 2023

Intel

Vancouver, BC

- Developed and validated software for network interface cards as part of Intel's NEX Cloud Networking Group.
- Refactored legacy procedural code in C#/.NET test suites into an object-oriented design, reducing the occurrence of test conflicts by 95-99%.
- Implemented a new manageability feature and added over 500 automated tests to the regression and CI pipelines, enhancing test coverage and reliability.

PROJECTS

Interactive Model Solar System | TypeScript, React, Three.js, Mantine

August – September 2023

- Built an immersive 3D solar system simulation using React Three Fiber, complete with real-time celestial motion and lighting using React Three Fiber.
- Added accompanying content by integrating Mantine with React, allowing users to display portfolio information by interacting with the solar system's planets.
- Enhanced interactivity with camera transitions that dynamically follow planets selected by the user.

Subletter - Virtual Marketplace | JavaScript, Express.js, MySQL, React, ChakraUI

July – August 2023

- Developed a full-stack virtual marketplace application catered towards university students' housing needs.
- Implemented a live messaging platform using Socket.IO, enabling real-time communication between users.
- Created a secure user authentication system utilizing JSON Web Tokens (JWT) and Cookies, along with bcrypt-based encryption to hash and safely store passwords.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C#, Python, C/C++, Java, HTML, CSS

Frameworks & Libraries: React, Node.js, Express.js, .NET, Jest

Databases: PostgreSQL, MySQL, MongoDB, Redis

Developer Tools & Platforms: Git, GitHub, Docker, Kubernetes, Azure, Splunk, Copilot, Cursor, Claude Code
